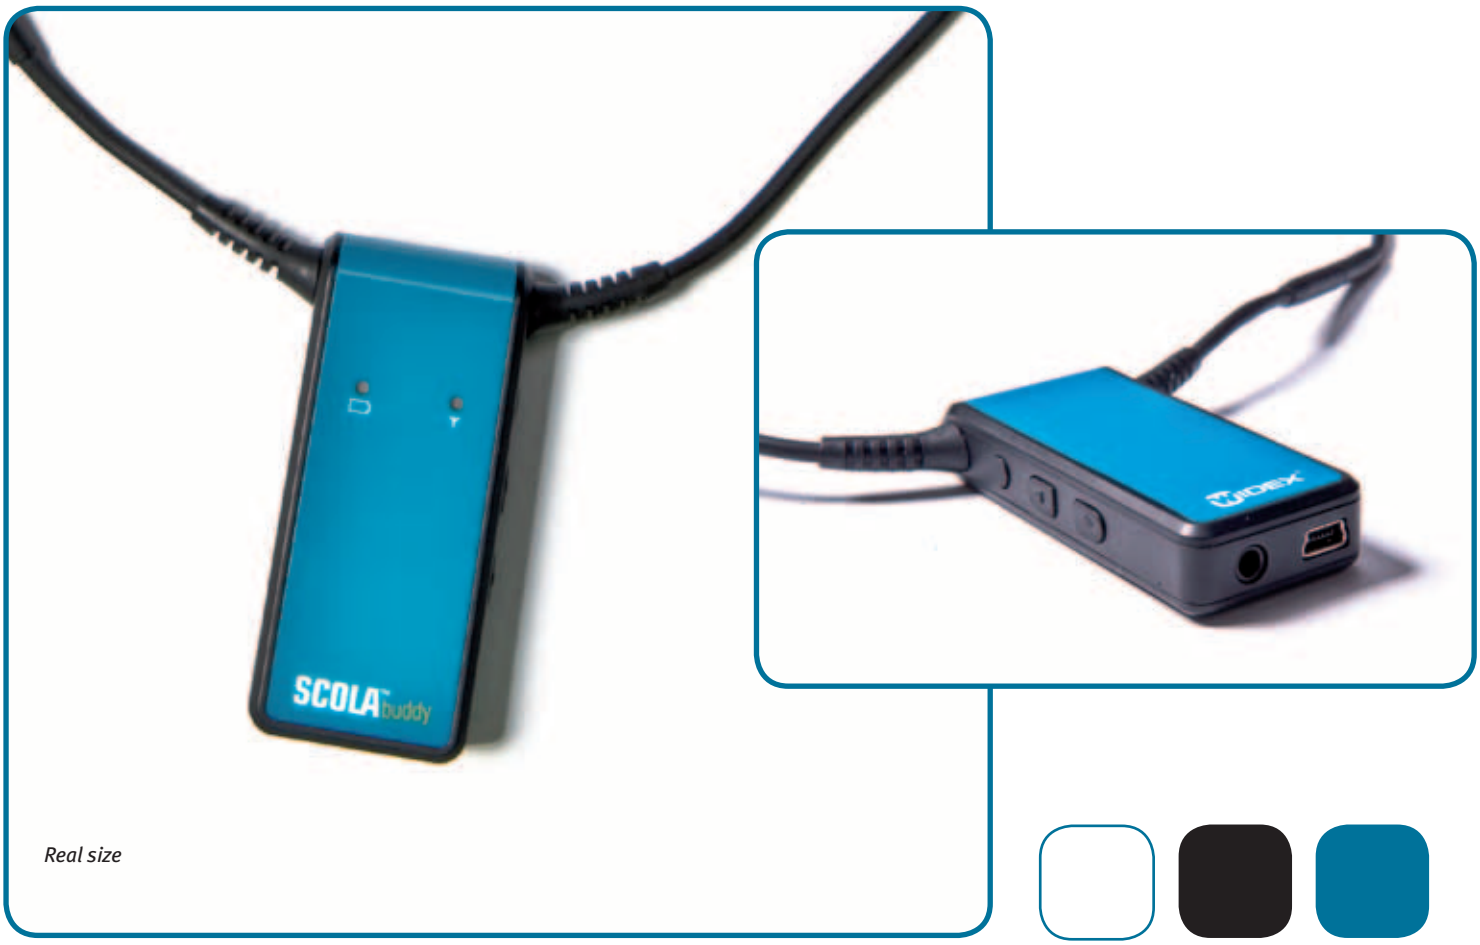
Tune in on life with SCOLA™ buddy



Real size

SCOLA*buddy*

SCOLA™*buddy* is the latest FM receiver from Widex. It is a body–worn receiver that combines trusted and proven induction loop technology with SCOLA FM technology.

One unit, two versions
SCOLA*buddy* is perfect in schools and places with noise and poor acoustic environments. It can be connected wirelessly to any hearing aid, cochlear processor or bone-anchored hearing aid using the MT or T setting.

SCOLA*buddy* can also be programmed to be used as an FM receiver connected directly to headphones.

SCOLA*buddy* benefits:
- Flexible usage with all telecoil hearing aids, both BTEs and ITEs - no audio shoes required
- Intuitive 3-button operation with LED indication for battery/charging status and FM reception
- Only one receiver for both hearing aids, potentially saving costs
- Channel control both as manual scan and channel synchronisation from SCOLA*teach* and SCOLA*classmate*
- Programming/fitting options with the SCOLA*programmer* to meet user's needs and requirements
- Same version covers all channels and frequency bands with an up to 30 channel memory
- Connects with MP3 player or similar, allowing music to be heard via the telecoil
- Rechargeable lithium battery via mini USB (from charger or from your PC)

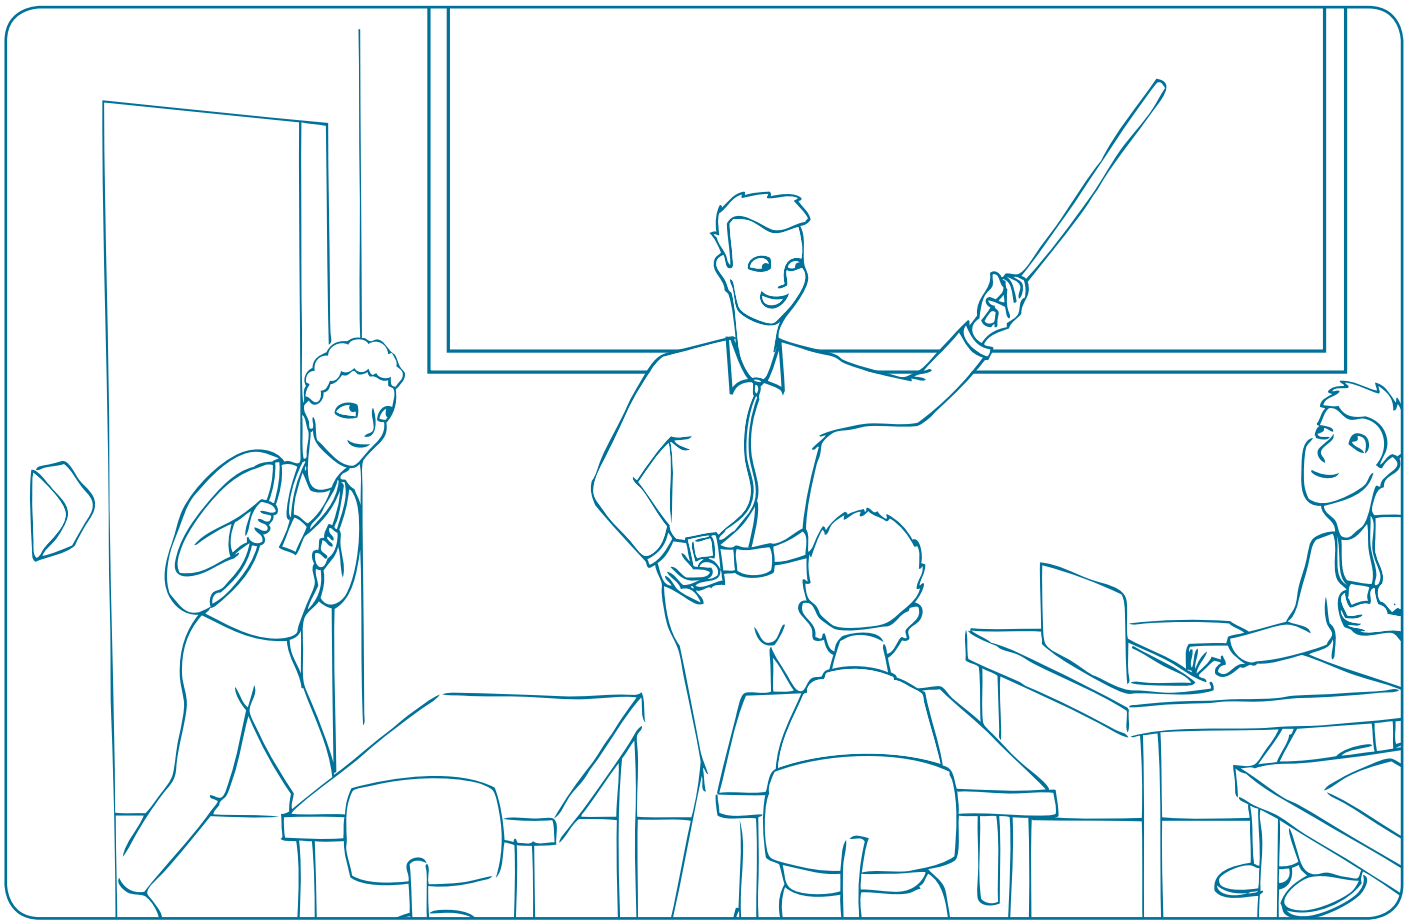
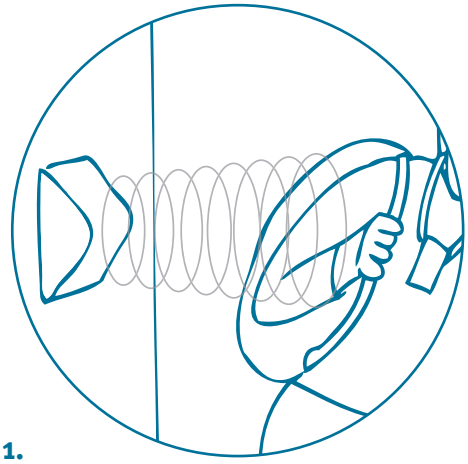
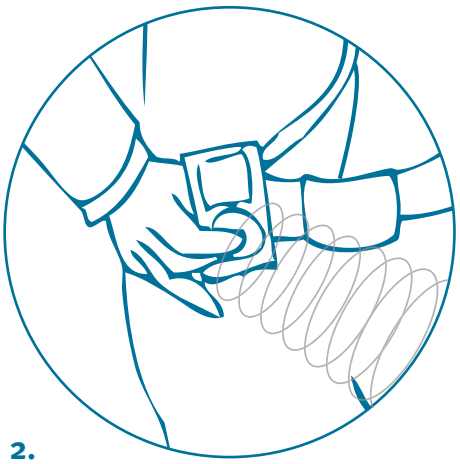
3 ways to select the receiving channel

9 502 1880 001 #01





1.



2.

3.

1. SCOLA*classmate* automatically synchronises the student's SCOLA*buddy* as he enters the classroom
2. With his SCOLA*teach*, the teacher synchronises the student's SCOLA*buddy* (from a distance of 80 cm and less)
3. On his SCOLA*buddy*, the student manually scans for and selects the teacher's SCOLA*teach* transmitting channel
